DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The many and multiple methods drawn to the many and multiple compounds administered including the compounds of broad formula as in claim 1 and the additional compounds of claim 11.

Applicant is required, in reply to this action, to elect a single species [i.e., elect a single and specific compound within the instant methods wherein every and all substituents R₁-R₆, R and n are assigned (e.g., claim 1) and elect a natural or synthetic compound (flavone, flavonoid, isoflavone, e.g., claim 11)] to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Art Unit: 1654

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Compound species: claims 1-15.

Natural or synthetic compound species: claims 11-14

The following claim(s) are generic: 1-15.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the compounds within the instantly claimed methods are drawn to materially different compositions as defined by the variables R_1 - R_6 , R and n (and the additional administration of a natural or synthetic compound such as a flavone, flavonoid or isoflavone), and therefore the claimed method species are also drawn to materially different steps drawn to administration of materially different compounds.

The aforementioned species are drawn to materially different methods due to the different compounds used as explained above. The search for each of the above species is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate one species would not necessarily anticipate or even make obvious another species. Finally, the consideration for patentability is different in each case. Thus, it would be an undue burden to examine all of the above species in one application.

Because these species are materially and functionally distinct for the reasons given above and the search required for each species is not necessarily required for the other species, election for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
